UEMCON 2022

Aspects of VR
CORS AND HTTP

ISSUE

CORS is managed by HTTP servers – they may require CORS

The browser knows we have several ports open

- Not a good idea to allow Cross origin resource sharing for some HTTP servers

The server requires more work to get to allowing no-cors mode

- May not be a good idea
- Could white list guests (REST callers) - constrains system

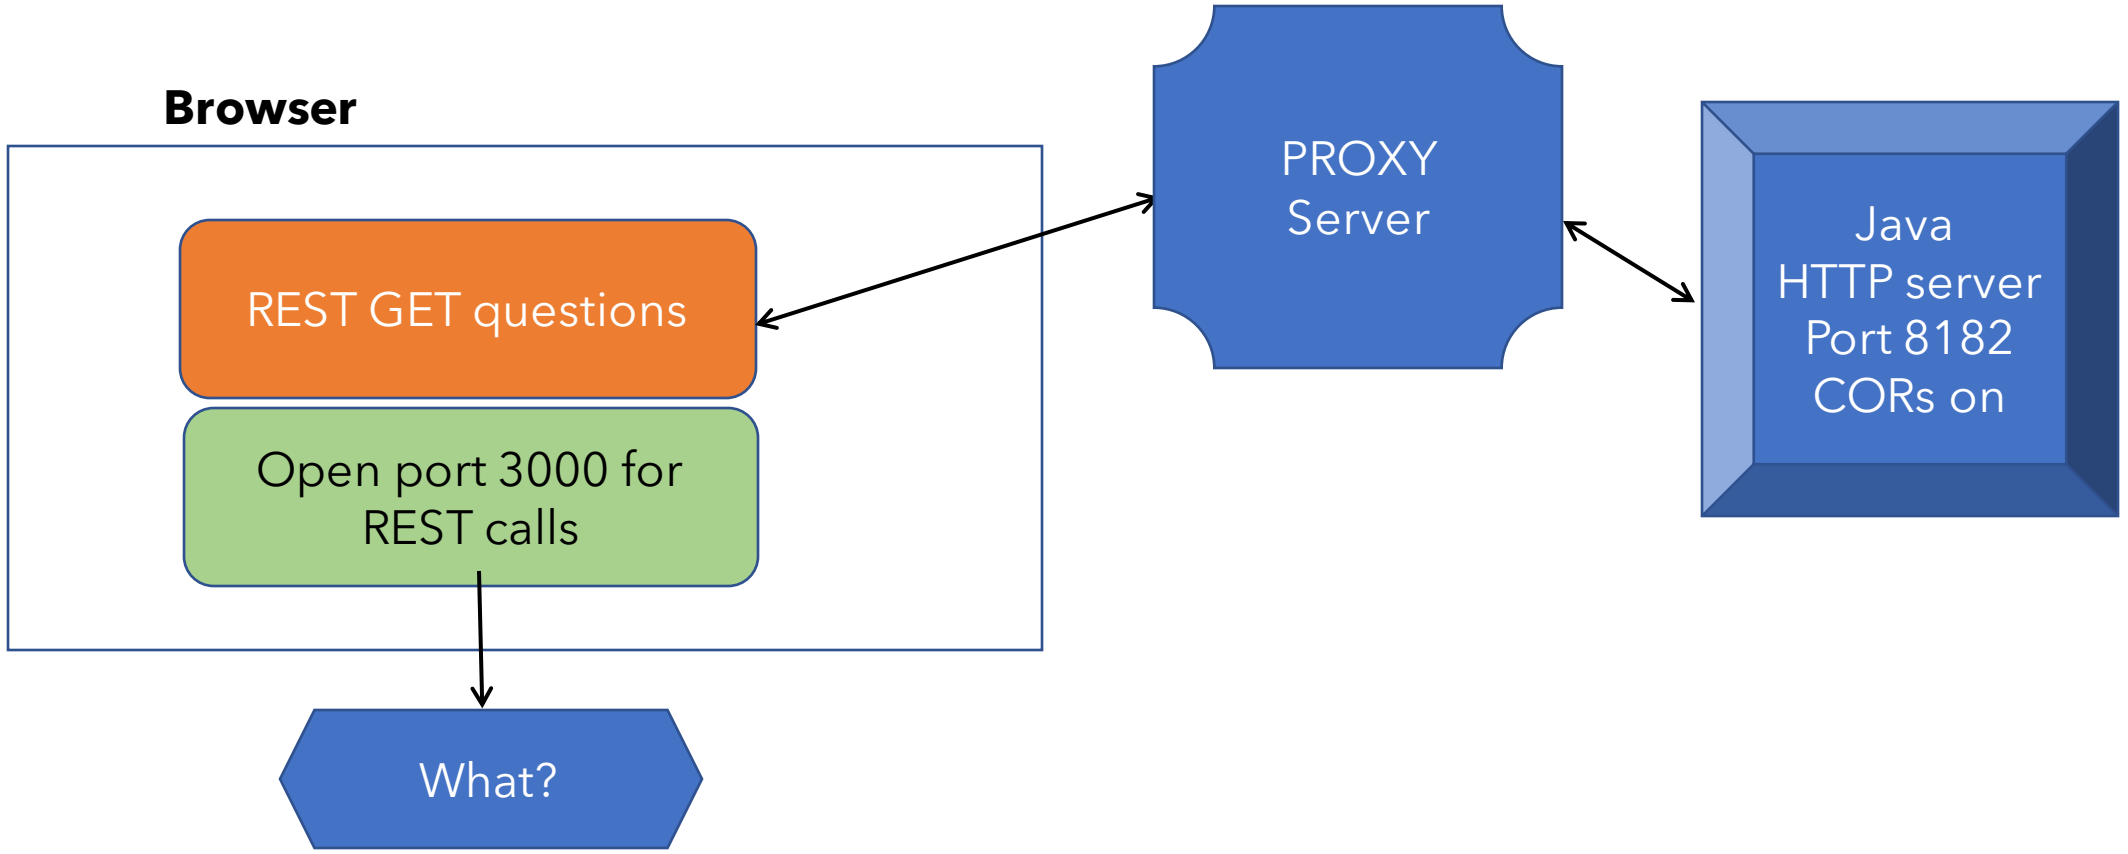
SEVERAL SOLUTIONS



This content is protected and may not be shared, uploaded, or distributed

PROXY

Can have its own security

Add security

Can white-list/black-list

Handles CORs issues – by having its own CORS set for the HTTP side…
